Emmanuel Onoja

Frontend Engineer

emmanuelonoja291@gmail.com eniigma.dev

Summary

Creative and detail-oriented frontend developer with hands-on experience building modern, responsive, and intuitive user interfaces. Skilled in JavaScript, React, Next.js, and TailwindCSS. Passionate about delivering smooth user experiences and contributing to impactful products like NuWell. Experienced in working with cross-functional teams and translating design ideas into performant, accessible web applications.

Experience

Nuwell AI

Software Developer (Founder) Jul 2025 - present

- Built and launched the NuWell web and mobile platform, a health-tech nutrition assistant powered by AI.
- Implemented responsive UIs using Next.js, Tailwind CSS, and React Native .
- Integrated AI features and image-based food logging functionality.
- Collaborated closely with backend and AI teams to build calorie prediction and recipe recommendation features.

Jojo Exhange

Python developer and Blockchain research Aug 2025 - Dec 2026

- Conducted in-depth research on AI agents, including competitive analysis and strategic documentation to guide product development.
- Built and deployed the **JoJo X Agent**, an automated AI agent for tweet posting using FastAPI.
- Developed a full JavaScript dashboard to monitor, control, and manage agent behavior and posting workflows.
- Wrote and edited AI-related product documentation and contributed to feature planning.

SuperEX Nigerian DAO

DAO Member (Community and Content) Aug 2022 - Feb 2026

- Led crypto education initiatives, simplifying complex trading and blockchain concepts for users.
- Managed and engaged the community across platforms, supporting user growth and retention.
- Assisted the design team with UI/UX feedback and product improvements.
- Collaborated with product and development teams to support feature planning and documentation.
- Wrote internal and user-facing documentation to improve product clarity and onboarding.

Awards

Most creative student

The department of food technology Nov 2025

* Development and active maintenance of the cloud-based file storage software for proper organization and access to the department's digital files for students and lecturers.

Objective

To contribute to forward-thinking teams where I can grow as a frontend engineer, build delightful user experiences, and help shape products that solve real-world problems with modern web technologies.

Languages
